

Query: "where did the user live before Berlin"

1 Cosine recall

top-k by embedding, over all facts

e.g. closed facts such as Paris can enter here

2 Listwise relevance (Jev)

one yes/no relevance question per candidate

e.g. ranks the candidates

3 Query-relation pull (Jev)

query_relation at $p \geq 0.85$ adds same-relation facts

e.g. query_relation = lives_in (asserted by the test)

4 History expansion

adds each hit's superseded chain

e.g. Berlin's chain adds Paris

5 Compact rendering → answer

date said · fact · source quote

e.g. Paris shown as no longer true
